HOME SNOW

This small and portable snow-machine has been made especially for private, hotels and clubs use so that nobody will miss having a white Christmas!

- The only requirements to make snow is water (about 5 – 7°C) from a normal house water connection and an outside temperature of at least –1 to –3°C.
- Snow can be produced at higher temperatures depending on how dry the air is, this means for instance at 50 % air humidity, it will start snowing at –1°C.
- The pump and compressor both need to be connected with normal 230 Volt connections.
- The small snow gun makes about 1 – 1.5 m³/hour of snow with normal quality, as compared with the professional snow guns with the same features by a wet-bulb temperature of -3°C.
- It's possible to put the standpipe from the lance in a parasol support or in the earth using a screw-in foundation.
- This machine can also be used as a high pressure cleaner or as compressor in spring/summer/autumn.

Technical details:

Lance

(ready for connection to the compressor and high-pressure cleaner)

lance length	3 m
outside-diameter standpipe	6.05 cm
water hose length	3 m
air hose length	3 m
tilt	adjustable

High-pressure cleaner:

electrical connection	230 V / 50 Hz
power consumption	2.2 kW
operating pressure	50 – 115 bar
flow rate	500 l/h
weight	15 kg

Compressor:

electrical connection	230 V / 50 Hz
power consumption	0.56 kW
operating pressure	8 – 10 bar
flow rate	85 l/min
weight	22 kg
